

A photograph of three brown horses running across a green field. The horses are captured in motion, with their manes and tails flowing. The background is a dark, blurred sky, suggesting a sunset or sunrise setting. The overall mood is dynamic and energetic.

CRAFTSMANSHIP AND EXPERTISE IN DESIGNING HORSE STABLES

We tend to your needs in finding the perfect system to keep your horses. Elegant and safe stalls are just as important to us as innovation in design. With that in mind, we engineered our HAU 2-Point Safety Lock. Our “Know Hau” lies in the details!

HAU. IT WORKS!

We produce
our stalls in
widths and
depths that
fit your stable

HAU 2-POINT SAFETY LOCK

The convenient one-hand operation locks two latching bolts at the same time. Thus, the door locks at the top and bottom at once.

STAINLESS STEEL FOLDING HANDLE

Our handle ensures convenient opening of the stall doors, both from the stall and the aisle.

ADJUSTABLE HINGES

All our swing doors come with particularly compact, adjustable hinges.

HORIZONTAL TUBING IN PARTITION WALLS

To avoid injuries, our partition wall grates are designed with an additional horizontal tube at the top.

DOUBLE-WALLED U-SHAPED SECTIONS

For even greater safety, we produce all our partition walls with double-walled U-shaped sections.

INDOOR STALLS

Each stable is different and has individual requirements concerning interior design. For that reason, we offer 4 different indoor stall series with ample design options. Whether sliding doors or swing doors, standard or special measurements - safety always comes first.

The stall fronts can be powder-coated or manufactured in stainless steel. In addition, we offer a broad selection of wood types and numerous fittings, such as any of our feeding technology options.

We manufacture subject to the requirements of FN (Fédération Équestre Nationale, Deutsche Reiterliche Vereinigung e.V.) and the guidelines of BMEL (German Ministry for Food and Agriculture) with bars (dia. 27 mm) at a safety spacing of 50 mm. Hot-dip galvanising is done in accordance with DIN EN ISO 1461.

INSPIRATION

The sliding door series with a swing door appearance.

Our unique design combines the advantages of a sliding door with an open, friendly stable aisle without the upper railing of a traditional sliding door. In our HAU Inspiration series, every swing door model is now also available with a sliding door. The distinctive construction of the Inspiration stable fronts eliminates the restriction of headroom from the running rails. The elegance of swing door models remains fully preserved, regardless of whether they are low fronts or standard height.

INSPIRATION

DERBY

The functional classic with sliding doors.

Whether in a straight standard design or with arches - we always use our proven sliding door technology.

The space-saving sliding door travels on two large and smoothly running rollers on a hot-dip galvanised C-rail. Our Derby doors come in widths of up to 161 cm and heights of more than 251 cm below the C-rail.

EQUIPE

The versatile swing door series.

Whether closed, with complex curves or reduced grating, the heart of all our Equipe swing doors is a proprietary development: our HAU 2-point safety lock.

The convenient one-hand operation locks the door above and below at the same time and thus guarantees perfect safety. Therefore, a separately operated night-time latch is no longer necessary. Due to a stainless-steel folding handle, the stall door may be operated both from the aisle and the stall. Moreover, our swing doors come with particularly compact, adjustable hinges.

PARTNER

The medium-height solution.

Due to its open design, this model allows for ample contact between man and horse, as well as between the horses

The stalls are available with swing or sliding doors. For that reason, they all come with the technical features of the Equipe or Derby series.

PARTITION WALLS

Our partition walls consist of three modules: the grid, the wood panel, and the U-shaped floor section. This design allows for a more flexible assembly compared to having all parts of the frame welded together. We also offer the possibility of the U-shaped floor section from stainless steel.

Naturally, the partition walls may be powder-coated or manufactured in stainless steel. Each partition wall can also be equipped with optional visual protection in the grid area. The wood panels of the partition wall can be matched to the stall fronts.

The grid is manufactured subject to the requirements of the FN (Fédération Équestre Nationale, Deutsche Reiterliche Vereinigung e.V.) and the guidelines of BMEL (German Ministry for Food and Agriculture) with bars (dia. 27 mm) at a safety spacing of 50 mm. It comes with horizontal tubing on top to avoid injuries. The double-walled U-shaped sections guarantee particular stability. Hot-dip galvanising is done in accordance with DIN EN ISO 1461.

PARTITION WALLS VARIATIONS: SWIVELLING OR SLIDE-OUT

Unlike the standard partition walls, our variable models are manufactured with a welded frame. Swivelling or slide-out partition walls are used to facilitate cleaning processes, speed up assembly and disassembly, and offer variable use.

The slide-out partition walls travel on a guide rail and swivelling partition walls come with hinges and can be folded. In the case of both versions, a hardwood manure plank is attached below.

projects

INHALATION STALL

The HAU Inhalation Stall offers horses with respiratory and skin conditions a way to find relief and treat healthy horses to some wellness.

It is a closed room of 23m³ and consists of solid wood outer walls and a flat roof. A horse stable door is built into the front, while side walls with contact windows are available as an option. The entire steel construction of the HAU inhalation stall is KTL coated and then powder coated. This type of coating provides optimal protection for steel construction in a salty environment. The floor of the stall is lined with non-slip rubber mats.
